

Delta MOD-TECH®

- **Bring your products to market faster.**
- **Lower your risk with proven technology**
- **Custom engineered solutions for today & flexibility for the future.**
- **Dedicated service staff.**

Delta's engineers are ready and waiting for the challenges of your creative ideas. The majority of Delta employees are mechanical, electrical or design engineers who thrive on the unlimited possibilities of web converting and packaging technology.

11501 Eagle Street NW
Minneapolis, MN 55448

**Delta Mod-Tech®
Process Flexibility**

Delta's Unwind/Rewind Modules handle the unwinding of full rolls of web material as well as the rewinding of waste weed, liners, or finished web products.

The Rotary Die Module is the cornerstone of our converting systems. Each Rotary Die Module can be used for any of the following processes by simply changing the tool roll:

- Laminating
- Nipping
- Die Cutting
- Punching
- Embossing
- Slitting
- Sheeting

Delta's Flexographic Printer offers quick change-over, continuous ink agitation and multi-station print capability.

**Delta
MOD-TECH®
the possibilities
are endless..**

The Edge® Laser Die Cutting Module is an efficient solution to the ever changing label & label finishing markets.

The Island Placement module allows you to combine two webs together with each having a different line speed. Island placement modules are used for high-value products with two or more webs. Each component has a different part repeat, these components come together to produce a final product with almost zero waste. This type of module is used in the converting of RFID labels, medical epidermal electrodes and hydrogel products, sophisticated multi-layer labels and more.

This Stacker is servo controlled for high speed, accurate count stacking of discrete parts.

Delta Conveying Modules optimize the performance of a Delta Mod-Tech® converter. Please ask for more information on Spreading, Bullnose, Reject and Shingling Conveyors.

Delta's Digital Printer offers the opportunity to print and finish within the same system. Speed and flexibility make this an exceptional option.

Seamless Vision Integration, the Delta vision system features ease of control, a single point of operation.
